

Community Water Deliveries

1. Homeowners living in a community with a sign-up box shall be required to sign up for each week that they wish to receive water.
2. You must have an account set up with Buckeye Water Conservation and Drainage District, have your assessments paid up and have available funds in the account prior to receiving irrigation water.
3. The homeowner must sign-up by Wednesday night, with the volume of water needed.
 - a. The volume is determined by the number of miner inches times the length of the run (40 miner inches = 1 cubic foot per second).
 - b. Minimum head size is 100 miner inches.
 - c. One head size change will be allowed throughout the duration of the run.
 - d. The sign-up shall be in ink and accompanied by the homeowner's initials.
 - e. Homeowners will be charged for the amount they signed up for, regardless of their length of run.
4. The sign-up sheets shall be picked up Thursday morning.
 - a. Anyone not signed-up by that time will not be added later and shall not receive water for that week.
 - b. Anyone who has a delinquent account will be struck from the sign-up sheet and that time will not be factored into the total run.
5. Sign-up sheets will be returned by Thursday afternoon with the start and stop times for that community.
 - a. It is the community's responsibility to coordinate the order in which everyone that signed up will receive their water.
 - b. We will not advise, recommend or coordinate the order for any community with a sign-up box
 - c. We will only communicate with one person within or appointed by the community for the delivery of the water.
6. Water deliveries shall be from the canal to the laterals to the historical highpoint of the property.
 - a. Zanjeros will open and close the gates according to the specified start and stop time on the sheets.
 - b. If the community needs to shut off the head earlier than the run specified, upon notification, the zanjero will shut off the order when possible.
 - c. The community is responsible for the maintenance and cleanliness of the ditch starting at the delivery gate that diverts that water from the lateral.
 - d. The community is also responsible to ensure that the system is capable of handling the water delivered. Breaches, flooding, etc. is the responsibility of the community.
 - e. In the event of an emergency (breaches, flooding, etc.), the community can close the gate. Notify the zanjero whenever possible of such events.
7. Water deliveries will be made available from Thursday night until Monday, based on the water and lateral availability.
8. Rules subject to change at a later date by board approval.
